

# Evidence-Based Climate Science

Data opposing CO<sub>2</sub> emissions as the primary source of global warming

Edited by  
Don Easterbrook

**ISBN:** 978-0-12-385957-0

**PUB DATE:** September 2011

**LIST PRICE:** \$119.95

**DISCOUNT:** Agency

**FORMAT:** Electronic book text

**PAGES:** c. 408

**TRIM:** 6w x 9h

## AUDIENCE

This title will be of interest primarily to atmospheric scientists, oceanographers, meteorologists, and climatologists. It is also suitable as a reference for scientists practicing in the fields of environmental science, ecology, geology, and geophysics.

## SHELVING CLASSIFICATIONS

SCIENCE / Environmental Science,

SCIENCE / Earth Sciences /

Meteorology & Climatology

# Evidence-Based Climate Science

*Data opposing CO<sub>2</sub> emissions as the primary source of global warming*

*Don Easterbrook* Professor Emeritus, Western Washington University, Bellingham, WA, USA

ELSEVIER

**Objectively analyzes scientific data concerning patterns of past climate changes, influences of ocean temperature changes, the effect of solar variation, and the effect of CO<sub>2</sub> to objectively present evidence that natural causes are responsible for global warming and cooling, not CO<sub>2</sub>**

## KEY FEATURES

- An unbiased, evidence-based analysis of the scientific data concerning climate change and global warming
- Authored by 8 of the world's leading climate scientists, each with more than 25 years of experience in the field
- Extensive analysis of the physics of CO<sub>2</sub> as a greenhouse gas and its role in global warming
- Comprehensive citations, references, and bibliography
- Adaptation strategies are presented as alternative reactions to greenhouse gas emission reductions

## DESCRIPTION

Global warming and human-induced climate change are perhaps the most important scientific issues of our time. These issues continue to be debated in the scientific community and in the media without true consensus about the role of greenhouse gas emissions as a contributing factor.

*Evidence-Based Climate Science: Data opposing CO<sub>2</sub> emissions as the primary source of global warming* objectively gathers and analyzes scientific data concerning patterns of past climate changes, influences of changes in ocean temperatures, the effect of solar variation on global climate, and the effect of CO<sub>2</sub> on global climate to clearly and objectively present counter-global-warming evidence not embraced by mainstream scientists.

# TABLE OF CONTENTS

## **GEOLOGIC PERSPECTIVES**

1. **Geologic evidence of recurring climate cycles and their implications for the cause of global climate changes**—Don J. Easterbrook
2. **Evidence for synchronous global climatic events: Cosmogenic exposure ages of glaciations**—Don J. Easterbrook, John Gosse, Cody Sherard, Ed Evenson, and Robert Finkel

## **TEMPERATURE MEASUREMENTS**

3. **A critical look at surface temperature records**—Joseph D’Aleo
4. **2010—the hottest year on record?**—Steve Goddard

## **THE ROLE OF OCEANS**

5. **Relationship of Multidecadal Global Temperatures to Multidecadal Oceanic Oscillations**—Joseph D’Aleo and Don J. Easterbrook
6. **Setting the frames of expected future sea level changes by exploring past geological sea level records**—Nils-Axel Mörner
7. **The Maldives: a measure of sea level changes and sea level ethics**— Nils-Axel Mörner
8. **Arctic sea ice**—Steve Goddard
9. **Have increases in CO<sub>2</sub> contributed to the recent large upswing in Atlantic basin major hurricanes since 1995?**—William M. Gray and Philip J. Klotzbach

## **SOLAR ACTIVITY**

10. **Solar changes and the climate**—Joseph D’Aleo
11. **The current solar minimum and consequences for climate**—David Archibald
12. **Total solar irradiance satellite composites and their phenomenological effect on climate**— Nicola Scafetta
13. **Global brightening and climate sensitivity**—Christopher Monckton of Benchley
14. **The relationship of sunspot cycles to gravitational stresses on the sun**—Edward L. Fix

## **MODELING**

15. **A simple model to examine the relationship between atmospheric CO<sub>2</sub> concentration, and ocean and land surface temperatures**—James P. Wallace, III, Anthony Finizza, and Joseph D’Aleo
